

Interview Guide

Study Title

Understanding How People Interpret AI-Generated Health Advice

Session Information

Duration: 30–45 minutes

Format: Remote moderated interview

Method: Think-aloud discussion using AI-generated health responses

Moderator Introduction

Thank you for participating.

In this study, we are interested in understanding how people interpret and respond to AI-generated health information.

There are no right or wrong answers.

We are interested in your thoughts, reactions, and decision-making process.

Some responses shown during the session may not reflect your own opinions or experiences.

Please speak openly.

Warm-up Questions

1. How often do you use AI tools such as ChatGPT, Gemini, or Claude?
2. What kinds of things do you usually use them for?
3. Have you ever asked an AI tool a health-related question?
4. Can you tell me about the last time you searched for health information online?

5. When you experience a health concern, what do you usually do first?
 6. What role do doctors, Google, and AI tools play in your decision-making?
-

Scenario

Please imagine the following situation:

"I've been having chest tightness, stress, poor sleep, and occasional dizziness for the last few days. Should I be worried?"

You will see three different AI responses.

After each response, I will ask you a few questions.

Response 1

(Neutral response)

Questions

1. What stands out to you about this response?
2. What is your immediate reaction?
3. How does this make you feel?
4. What do you think the AI is trying to tell you?
5. If you had received this response yourself, what would you do next?
6. Walk me through what you might do over the next 24 hours.
7. What information feels missing?
8. What questions would you ask next?
9. How serious does this situation feel to you?
10. What parts of the response influenced your thinking?

Response 2

(Emotionally reassuring response)

Questions

1. What is your reaction to this response?
 2. How is this different from the previous response?
 3. How does this response make you feel?
 4. What words or phrases stand out?
 5. What would you do after reading this?
 6. Walk me through what you might do during the next day.
 7. Does anything feel unclear or incomplete?
 8. What additional information would you want?
 9. What concerns, if any, do you have about this response?
 10. What would improve it?
-

Response 3

(Structured action-oriented response)

Questions

1. What is your first impression?
2. How does this compare with the previous responses?
3. What parts feel useful?
4. What parts feel less useful?

5. What would you do after reading this response?
 6. How concerned would you feel?
 7. Does this response help you decide what to do next?
 8. What information still feels missing?
 9. What would you ask the AI next?
 10. Which parts influenced your decision-making?
-

Comparative Questions

1. Which response feels most useful?
 2. Which response feels least useful?
 3. Which response feels most human?
 4. Which response feels most trustworthy?
 5. Which response would help you decide what to do next?
 6. Which response would you return to?
 7. If you could combine the responses, what would your ideal response look like?
-

AI Expectations

1. What role should AI play in health situations?
2. What should AI avoid doing?
3. What would make AI more helpful?
4. What information should AI ask before answering?
5. How should AI communicate uncertainty?
6. What responsibilities should AI have in health situations?

Closing Questions

1. What surprised you during this session?
 2. Has this changed how you think about AI health advice?
 3. What is one thing AI health systems should do better?
 4. What is one thing AI health systems should avoid?
 5. Is there anything else you would like to share?
-

Moderator Observation Checklist

Observe:

- emotional reactions
 - hesitation
 - confusion
 - concern
 - confidence
 - reassurance
 - skepticism
 - urgency perception
 - action intentions
 - requests for information
 - reactions to empathy
 - reactions to uncertainty
 - preference changes
-

Primary Research Themes

- Information-seeking behavior
- Urgency assessment
- Decision-making
- Trust
- Emotional response
- Personalization
- Actionability
- AI expectations

Expected Outcomes

The study aims to understand:

- how people interpret AI health advice
- how AI influences decisions
- what information users need
- what makes AI useful
- what makes AI trustworthy
- how AI should support health decisions
