

Study Overview

Aspect	Details
Study Type	Qualitative UX Research
Method	Moderated Remote Interviews
Participants	8 participants
User Groups	Parents and Young Professionals
AI Experience	Frequent AI users
Session Duration	30–45 minutes
Interview Format	One-on-one remote sessions
Research Stimuli	Three AI-generated health responses
Data Collected	Reactions, intended actions, urgency perception, information needs
Analysis Method	Thematic analysis and affinity mapping
Research Focus	Health information seeking and AI-assisted decision making

Study Flow

Symptom Scenario

Three AI Responses

Participant Reactions

Decision-Making Discussion

Behavior Patterns

Mental Models

Product Implications

Evaluated Response Types

Response 1 — Neutral Medical Response

Objective, medically cautious response.

Response 2 — Emotionally Reassuring Response

Supportive and empathetic response.

Response 3 — Structured Action-Oriented Response

Organized guidance with actions and monitoring advice.

What Was Explored

- Information-seeking behavior
- Urgency assessment
- Intended actions
- Emotional reactions
- Trust and skepticism
- Information sufficiency
- AI expectations
- Product opportunities
